EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Frank Nicholas and Paul Hletko on 11/16/2007.

The claims have been amended as follows:

Claim 1:

A method in a data processing system for providing a user of the data processing system with control of a software object organized into a plurality of information levels of varying amounts of information, the method comprising:

initially displaying a first display window having a first window size, wherein the first display window includes;

a first level tab navigation frame for allowing the user interactive access to a first information level of the plurality of information levels, and

a first window-sizing interface for allowing the user interactive access to a second window having a second window size,

wherein the second display window includes a second level tab navigation frame for allowing the user interactive access to a second information level of the plurality of information levels;

determining whether the direction of a presentation of the navigation frame is optimized to accommodate the changes to the information level within the display windows; and

displaying the second display window subsequent to the initial display of the first display window in response to the user interacting with the first window-sizing interface and based on whether the direction of the presentation is optimized.

Claim 10:

A computer readable medium containing thereon program code which, when executed on a computer system provides a user of a data processing system with control of a software object organized into a plurality of information levels of varying amounts of information, the computer readable medium comprising:

computer readable code for initially displaying a first display window having a first window size, wherein the first display window includes;

a first level tab navigation frame for allowing the user interactive access to a first information level of the plurality of information levels, and

a first window-sizing interface for allowing the user interactive access to a second window having a second window size,

wherein the second display window includes a second level tab navigation frame for allowing the user interactive access to a second information level of the plurality of information levels;

computer readable code for determining whether the direction of a presentation of the navigation frame is optimized to accommodate the changes to the information level within the display windows; and

computer readable code for displaying the second display window subsequent to the initial display of the first display window in response to the user interacting with the first window-sizing interface and based on whether the direction of the presentation is optimized.

Claim 19:

A system for providing a user of a data processing system with control of a software object organized into a plurality of information levels of varying amounts of information, the system comprising:

means for initially displaying a first display window having a first window size, wherein the first display window includes;

a first level tab navigation frame for allowing the user interactive access to a first information level of the plurality of information levels, and

a first window-sizing interface for allowing the user interactive access to a second window having a second window size,

wherein the second display window includes a second level tab navigation frame for allowing the user interactive access to a second information level of the plurality of information levels;

means for determining whether the direction of a presentation of the navigation frame is optimized to accommodate the changes to the information level within the display windows; and

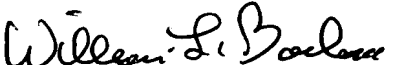

means for displaying the second display window subsequent to the initial display of the first display window in response to the user interacting with the first window-sizing interface and based on whether the direction of the presentation is optimized.
